

blush

shoegaze delay / pitch shifter

blushes of pink, let's have a look at your new blush pedal shall we?

features

a unique, truly multi-function delay

layered, textural effects are the essence of shoegaze sound, so blush has the ability to layer ethereal effects & textural functions simultaneously. this is something we haven't found anywhere else. swirl shimmer delays with soft nostalgia modulation, vintage digital oscillations & stereo panning all at the same time!

stereo panning delays

stereo sound is a recognisable part of how pedal partners makes shoegaze music. when dreaming up blush, stereo panning was the first feature we wanted to add. it creates encompassing layers of immersion, especially when combined with blush's other textural effects.

soft nostalgia modulation

soft nostalgia is our multi-voiced shoegaze modulation effect. it can be blended with blush's delays to create custom modulated delays to taste.

blendable polyphonic pitch shift

blend in shoegaze shimmers or low octave effects with your delays. this pitch shift effect is actually useable as it's polyphonic - it will work with whatever you throw at it, single notes, chords, anything else?!

delay time three times longer than vintage units

blush has up to 3 seconds of delay time when using both outputs with the sample rate & tap controls. you can even create mini loops up to 6 seconds long if you only use the right output.

authentic vintage sound

like all our pedals, blush is built from the ground up with authentic vintage engineering, including 12 bit circuitry, vintage filters, emphasis & deemphasis.

controls

blend

controls the wet / dry blend for the entire pedal.

shimmer blend

instantly blend in a polyphonic shoegaze pitch effect.

shimmer slider

glide the shimmer slider from -1 octave through to +1 octave.

drift slider

controls the delay time & sample rate for the whole pedal. lowering this control creates more lofi effects.

cascades slider

controls the delay or pitch feedback for classic cascading delay oscillations or incremental pitch shifting.

soft nostalgia

choose between 0%, 50% & 100% soft nostalgia blend for euphoric chorus tone.

tap / hold

select between tap tempo (red led) & hold (blue led) functions. you can use these functions simultaneously, at which point the led will turn pink!

signal led

similar to vintage studio delays, the signal led helps you maintain a healthy signal level, when the led lights up you are clipping - whoops!

power

blush is 9v, 150 mA.
